

DIGITAL LITERACY PROJECT REPORT

Name: Satish Kumar

Reg No.: 25BAI11082

Branch: B.Tech CSE (AI & ML)

Course: CSE0001 – Digital Literacy

Introduction

The Digital Literacy Project was designed to help students develop essential digital skills required in today's technology-driven world. As a Student Digital Ambassador, the objective of this project was to understand and demonstrate how digital tools, platforms, and online communication can be used effectively, responsibly, and safely. This project included five different tasks, each focusing on a specific aspect of digital literacy such as awareness, professional presence, collaboration tools, communication etiquette, and cyber safety. Through this project, I explored various platforms like GitHub, LinkedIn, Kaggle, and HackerRank, and learned how to use them for academic and professional growth. Overall, this project enhanced my understanding of the digital world and helped me build a strong foundation for future learning and career opportunities.

Task 1: Digital Literacy Infographic

In Task 1, I created a digital literacy infographic to raise awareness among students about the importance of digital skills in today's world. I used Canva as the design tool because it provides easy-to-use templates and visually appealing elements. The infographic covered key topics such as the meaning of digital literacy, useful digital tools, safe internet practices, professional online presence, and email etiquette. Digital literacy was explained as the ability to use digital technologies effectively, responsibly, and safely. I included tools such as Google Docs, Canva, Zoom, and GitHub, highlighting how they help students in academics and collaboration. I also emphasized safe internet practices like using strong passwords, avoiding suspicious links, and protecting personal information. The design focused on minimal text and maximum visual clarity so that students could easily understand the content. Icons and structured sections were used to make the infographic engaging and informative. The most challenging part was selecting the right amount of content and organizing it neatly within a single page. Overall, this task improved my creativity and communication skills.

Task 2: Student Digital Portfolio

In Task 2, I developed my student digital portfolio by creating and updating profiles on important platforms such as GitHub, LinkedIn, and Kaggle. These platforms are essential for building a professional online presence and showcasing skills to recruiters and academic communities. I created a GitHub profile README that includes my basic details, skills, and learning goals. On LinkedIn, I updated my education details and created a professional profile. On Kaggle, I added my bio, interests, and goals related to data science and machine learning. Each platform serves a different purpose. GitHub is used for storing and sharing coding projects, LinkedIn helps in professional networking, and Kaggle is useful for learning data science and participating in competitions. Over the next four years, I plan to regularly update my profiles with new projects, certifications, and achievements. This task helped me understand the importance of maintaining a professional digital identity.

Task 3: Coding & Collaboration Platforms

In Task 3, I explored coding practice platforms and collaboration tools. For Part A, I created an account on HackerRank and completed a beginner-level coding challenge, which helped me improve my problem-solving skills. For Part B, I created a Google Form titled "Digital Literacy Awareness Quiz" with five questions, including both multiple-choice and short-answer types. I also linked the responses to Google Sheets to analyze results efficiently. This task introduced me to

practical tools used in academics and professional work. Coding platforms enhance logical thinking, while collaboration tools like Google Forms and Sheets help in surveys, quizzes, and data analysis. The most interesting part was creating the quiz and analyzing responses. Overall, this task improved my technical knowledge and collaboration skills.

Task 4: Email Etiquette & Communication

In Task 4, I learned about professional communication and email etiquette. I wrote two formal emails—one requesting an assignment extension and another applying for a summer internship. Both emails followed proper structure with subject line, greeting, body, and closing. Additionally, I created a Social Media Do's and Don'ts checklist that highlighted responsible online behavior. This included maintaining professionalism, thinking before posting, and avoiding inappropriate content. This task helped me understand that communication plays a very important role in academic and professional environments. Poor communication can create misunderstandings and a negative impression. Overall, this task improved my writing skills and helped me develop better communication habits.

Task 5: Cybercrime Awareness

In Task 5, I studied cybercrime, focusing on UPI and online payment fraud. I created a case study explaining how such frauds occur through fake calls, phishing links, and misuse of OTPs. Students are often targeted due to lack of awareness. The consequences include financial loss and stress. I also created a 'Stay Safe Online' checklist with preventive measures such as not sharing OTPs, avoiding suspicious links, and verifying transactions. I included reporting channels like the National Cyber Crime Portal and helpline 1930. This task made me more aware of online threats and the importance of cybersecurity. I will be more careful in handling digital transactions in the future.

Conclusion

This project helped me develop practical digital skills and understand the importance of online safety, communication, and professional presence. It has prepared me to use digital tools more effectively in academics and future career opportunities.
